MADE IN THE UNITED STATES OF AMERICA

Contents of Volume 162

Number 1, January 1988

Mechanism of Interaction between Endogenous Ecotropic Murine Leukemia Viruses in (BALB/c × C57BL/6) Hybrid Cells — Steven R. King, Bennett J. Berson, and Rex Risser 1

Sequence Comparison of Woodchuck Hepatitis Virus Replicative Forms Shows Conservation of the Genome — Jeffrey I. Cohen, Roger H. Miller, Betsy Rosenblum, Katherine Denniston, John L. Gerin, and Robert H. Purcell 12

Neutralization Sites of Type O1 Foot-and-Mouth Disease Virus Defined by Monoclonal Antibodies and Neutralization-Escape Virus Variants — J. W. Stave, J. L. Card, D. O. Morgan, and V. N. Vakharia 21

Host Range Control of Cauliflower Mosaic Virus — James E. Schoelz and Robert J. Shepherd 30

Concatemerization and Packaging of Bacteriophage T7 DNA *in Vitro:* Determination of the Concatemers' Length and Appearance Kinetics by Use of Rotating Gel Electrophoresis — Marjatta Son, Shirley J. Hayes, and Philip Serwer 38

Defined Recombinants of Poliovirus and Coxsackievirus: Sequence-Specific Deletions and Functional Substitutions in the 5′-Noncoding Regions of Viral RNAs — Victoria H. Johnson and Bert L. Semler 47

Heterogeneity of the Polyribocytidilic Acid Tract in Aphthovirus: Changes in the Size of the Poly(C) of Viruses Recovered from Persistently Infected Cattle — M. P. Costa Giomi, I. Gomes, B. Tiraboschi, P. Auge de Mello, I. E. Bergmann, E. A. Scodeller, and J. L. La Torre 58

Time Course of Virus-Specific Macromolecular Synthesis during Rubella Virus Infection in Vero Cells — Mark L. Hemphill, Ren-Yo Forng, Emily S. Abernathy, and Teryl K. Frey 65

Requirements for Immortalization of Primary Mouse Embryo Fibroblasts Probed with Mutants Bearing Deletions in the 3′ End of SV40 Gene A — M. J. Tevethia, J. M. Pipas, T. Kierstead, and C. Cole 76

Lymphocytic Choriomeningitis Virus. X. Demonstration of Nucleoprotein on the Surface of Infected Cells — Wolfgang Zeller, Michael Bruns, and Fritz Lehmann-Grube 90

Replication of the Murine Cytomegalovirus Genome: Structure and Role of the Termini in the Generation and Cleavage of Concatenates — Jeffrey R. Marks and Deborah H. Spector 98

Molecular Cloning and Physical and Translational Mapping of the Frog Virus 3 Genome — L. Tondre, T. N. Tham, P. H. Mutin, and A. M. Aubertin 108

Induction of an Antiviral State by Interferon in the Absence of Elevated Levels of 2,5-Oligo(A) Synthetase and eIF-2 Kinase — John A. Lewis 118

Major Rearrangement of Cellular DNA in the Vicinity of Integrated Polyomavirus DNA — Denis Allard, Louis Delbecchi, Danielle Bourgaux-Ramoisy, and Pierre Bourgaux 128

Nucleotide and Deduced Amino Acid Sequence of Hemagglutinin-Neuraminidase Genes of Human Type 3 Parainfluenza Viruses Isolated from 1957 to 1983 — Kathleen L. van Wyke Coelingh, Christine C. Winter, and Brian R. Murphy 137

Site-Directed Mutagenesis of the Polyomavirus Genome: Replication-Defective Large T Mutants with Increased Immortalization Potential — Claude Roberge and Marcel Bastin 144

Establishment of Human Glial Cell Lines Chronically Infected with the Human Immunodeficiency Virus — Stephen Dewhurst, Koji Sakai, Xin Hua Zhang, Andrzej Wasiak, and David J. Volsky 151

Origin of the Hemagglutinin Gene of H3N2 Influenza Viruses from Pigs in China — Hiroshi Kida, Kennedy F. Shortridge, and Robert G. Webster 160

Nucleotide Sequence of Dengue 2 RNA and Comparison of the Encoded Proteins with Those of Other Flaviviruses — Young S. Hahn, Ricardo Galler, Tim Hunkapiller, Joel M. Dalrymple, James H. Strauss, and Ellen G. Strauss 167

The Action of Recombinant Bovine Interferons on Influenza Virus Replication Correlates with the Induction of Two Mx-Related Proteins in Bovine Cells — M. A. Horisberger 181

Evidence that the Mature Form of the Flavivirus Nonstructural Protein NS1 Is a Dimer — Gunther Winkler, Valerie B. Randolph, Graham R. Cleaves, Terence E. Ryan, and Victor Stollar 187

Recognition of Simian Virus 40 T Antigen Synthesized during Viral Lytic Cycle in Monkey Kidney Cells Expressing Mouse H-2K^b- and H-2D^b-Transfected Genes by SV40-Specific Cytotoxic T Lymphocytes Leads to the Abrogation of Virus Lytic Cycle — Michael P. Bates, Stephen R. Jennings, Yuetsu Tanaka, Mary J. Tevethia, and Satvir S. Tevethia 197

Comparisons of Host Cell DNA Insertions and Altered Transcription at the Site of Insertions in Few Polyhedra Baculovirus Mutants — Burton Beames and Max D. Summers 206

Cloning and Molecular Characterization of an Oral Papillomavirus of Domestic Rabbits — M. Kerry O'Banion, Mary E. Cialkowski, M. E. Reichmann, and John P. Sundberg 221

Short Communications

Effect of Beet Necrotic Yellow Vein Virus RNA Composition on Transmission by *Polymyxa betae* — O. Lemaire, D. Merdinoglu, P. Valentin, C. Putz, V. Ziegler-Graff, H. Guilley, G. Jonard, and K. Richards 232

CTL Recognition of Adenovirus-Transformed Cells Infected with Influenza Virus: Lysis by Anti-Influenza CTL Parallels Adenovirus-12-Induced Suppression of Class I MHC Molecules — Jonathan W. Yewdell, Jack R. Bennink, Kendra B. Eager, and Robert P. Ricciardi 236

Role of RAV-0 Genes in the Permissive Replication of Subgroup E Avian Leukosis Viruses on Line 15_B*ev*1 CEF — David W. Brown and Harriet L. Robinson 239

Identification of Sequences in the Long Terminal Repeat of Avian Sarcoma Virus Required for Efficient Transcription — Siddarame Gowda, Arepalli S. Rao, Yong Woong Kim, and Ramareddy V. Guntaka 243

***Agrobacterium*-Mediated infectivity of Cloned Digitaria Streak Virus DNA** — Jonathan Donson, Helen V. Gunn, Crispin J. Woolston, Marion S. Pinner, Margaret I. Boulton, Philip M. Mullineaux, and Jeffrey W. Davies 248

Virulence of and Establishment of Latency by Genetically Engineered Deletion Mutants of Herpes Simplex Virus I — Bernard Meignier, Richard Longnecker, Penelope Mavromara-Nazos, Amy E. Sears, and Bernard Roizman 251

Differential Detergent Treatment Allows Immunofluorescent Localization of the Newcastle Disease Virus Matrix Protein within the Nucleus of Infected Cells — Mark E. Peeples 255

Temporal Analysis of Transcription and Replication during Acute Infection with Lymphocytic Choriomeningitis Virus — F. V. Fuller-Pace and P. J. Southern 260

A Functional Role for Intermediate Filaments in the Formation of Frog Virus 3 Assembly Sites — K. G. Murti, R. Goorha, and M. W. Klymkowsky 264

Oligopeptides Inhibit the Ribonucleotide Reductase of Herpes Simplex Virus by Causing Subunit Separation — W. McClements, G. Yamanaka, V. Garsky, H. Perry, S. Bacchetti, R. Colonno, and R. B. Stein 270

Increased Expression of Novel Full-Length Endogenous Mink Cell Focus-Forming-Related Transcripts in Autoimmune Mouse Strains — Arthur M. Krieg, Alfred D. Steinberg, and Arifa S. Khan 274

Announcement 277

Author Index for Volume 162, Number 1 278

Number 2, February 1988

Visualization by Electron Microscopy of the Location of Tobacco Mosaic Virus Epitopes Reacting with Monoclonal Antibodies in Enzyme Immunoassay — I. Dore, E. Weiss, D. Altschuh, and M. H. V. Van Regenmortel 279

Sequence and Secondary Structure Analysis of the 5′-Terminal Region of Flavivirus Genome RNA — Margo A. Brinton and Janice H. Dispoto 290

The Glycoprotein C Gene of Herpes Simplex Virus 1 Resident in Clonal L Cell Lines Manifests Two Regulatory Domains Conferring a Dominant B and a Subordinate γ_2 Regulation — Minas Arsenakis, Gabriella Campadelli-Fiume, M. Teresa Lombardo, and Bernard Roizman 300

An Unusual Virus from the Parasitic Wasp *Cotesia melanoscela* — Donald B. Stoltz, Peter Krell, Doug Cook, Edmund A. MacKinnon, and C. J. Lucarotti . . 311

Analyses of the Cytotoxic T Lymphocyte Responses to Glycoprotein and Nucleoprotein Components of Lymphocytic Choriomeningitis Virus — J. Lindsay Whitton, Peter J. Southern, and Michael B. A. Oldstone 321

Cloning and Generation of a Genetic Map of Bacteriophage N4 DNA — C. Malone, S. Spellman, D. Hyman, and L. B. Rothman-Denes 328

Localization of Transfer RNA Genes on the Physical Map of *Vibrio eltor* Phage e_4 Genome — Samit Chattopadhyay and Ranajit Kumar Ghosh 337

Location of a Major Antigenic Site Involved in Ross River Virus Neutralization — Sudhanshu Vrati, Carol A. Fernon, Lynn Dalgarno, and Ronald C. Weir 346

The Coenrichment of Stem Cells, Prothymocytes, and Stromal Elements with Ecotropic Retrovirus-Producing Cells from the Bone Marrow of Leukemia-Prone AKR Mice — Robert W. Buckheit, Jr., Joanne Kurtzberg, Dani P. Bolognesi, and Kent J. Weinhold 354

Regulation of Hepatitis B Virus S Gene Promoter in Transfected Cell Lines — Ouriel Faktor, Tali De-Medina, and Yosef Shaul 362

Viral Proteins Required for the *in Vitro* Replication of Vesicular Stomatitis Virus Defective Interfering Particle Genome RNA — Richard W. Peluso and Sue A. Moyer 369

Expression of the v-*rel* Oncogene in Reticuloendotheliosis Virus-Transformed Fibroblasts — Barbara E. Moore and Henry R. Bose, Jr. 377

Differences in Bovine Parainfluenza 3 Virus Variants Studied by Sequencing of the Genes of Viral Envelope Proteins — Tatsuo Shioda, Shouji Wakao, Shinya Suzu, and Hiroshi Shibuta 388

Phage T4 DNA Codes for Two Distinct 10-kDa Proteins Which Strongly Bind to RNA Polymerase — Gilbert Orsini and Edward N. Brody 397

An Enhancer Element in the Short Unique Region of Human Cytomegalovirus Regulates the Production of a Group of Abundant Immediate Early Transcripts — Kathleen Weston 406

Direct Adverse Effects of Sendai Virus DI Particles on Virus Budding and on M Protein Fate and Stability — Christine Tuffereau and Laurent Roux 417

Clustering of Antigenic Sites Recognized by Cytotoxic T Lymphocyte Clones in the Amino Terminal Half of SV40 T Antigen — Yuetsu Tanaka, Mary J. Tevethia, Daniel Kalderon, Alan E. Smith, and Satvir S. Tevethia 427

Selection for Accelerated Penetration in Cell Culture Coselects for Attenuated Mutants of Venezuelan Equine Encephalitis Virus — Robert E. Johnston and Jonathan F. Smith ... 437

Functional Mapping of an AcNPV Immediately Early Gene Which Augments Expression of the IE-1 *trans*-Activated 39K Gene — David D. Carson, Linda A. Guarino, and Max D. Summers 444

Evidence That Immunological Variants of p53 Represent Alternative Protein Conformations — John Gamble and Jo Milner 452

Organization and Interviral Homologies of the Coat Protein Gene of White Clover Mosaic Virus — Sally-Ann Harbison, Richard L. S. Forster, Parry J. Guilford, and Richard C. Gardner 459

Transcription Stimulates Recombination. I. Specialized Transduction of *Escherichia coli* by λ*trp* Phages — Jeanne L. Dul and Henry Drexler 466

Transcription Stimulates Recombination. II. Generalized Transduction of *Escherichia coli* by Phages T1 and T4 — Jeanne L. Dul and Henry Drexler 471

Short Communications

Subcellular Localization of the Major Immediate Early Protein (IE1) of Human Cytomegalovirus at Early Times after Infection — Steven M. Otto, Glenda Sullivan-Tailyour, Cheryl L. Malone, and Mark F. Stinski 478

Gene Transfer into Hematopoietic Progenitor Cells Mediated by an Adeno-Associated Virus Vector — Drake LaFace, Paul Hermonat, Edward Wakeland, and Ammon Peck 483

Milk-Borne Transmission of Human T-Cell Leukemia Virus Type I in Rabbits — Shozo Hirose, Shigemitsu Kotani, Yoshiki Uemura, Masatoshi Fujishita, Hirokuni Taguchi, Yuji Ohtsuki, and Isao Miyoshi 487

Regulated Expression of Stably Transfected Herpes Simplex Virus Thymidine Kinase Genes in Continuous Cell Lines Expressing a Temperature-Sensitive Mutant Form of the Immediate-Early Protein ICP4 — John M. M. Pasick and James R. Smiley 490

Predominant Association of Adenovirus Type 12 DNA with Human Chromosome 1 Early in Productive Infection — Thomas Rosahl and Walter Doerfler 494

A Neutralizing Monoclonal Antibody Recognizes an 87K Envelope Glycoprotein on the Murine Cytomegalovirus Virion — Lambert C. Loh and Louis F. Qualtiere 498

TPA-Inducible Epstein–Barr Virus Genes in Raji Cells and Their Regulation — Gerhard Laux, U. Karl Freese, Robert Fischer, Axel Polack, Edith Kofler, and Georg W. Bornkamm 503

Coconut Tinangaja Viroid: Sequence Homology with Coconut Cadang-Cadang Viroid and Other Potato Spindle Tuber Viroid Related RNAs — Paul Keese, Maria E. Osorio-Keese, and Robert H. Symons 508

Author Index for Volume 162 511

Subject Index for Volume 162 513

NOTICE TO AUTHORS

Editorial Policy. *Virology* will publish articles on the biological, biochemical, genetic, and biophysical aspects of virus research. All manuscripts should meet the following four basic criteria. *First*, they should report *original* research results. Manuscripts are accepted for review on the understanding that the same or similar work, wholly or in part, has not been and will not be nor is presently submitted for publication elsewhere. *Second*, they should report research that is *fundamental*, rather than applied. Emphasis should be directed at understanding mechanisms by which viruses function, rather than on descriptions of virological phenomena. *Third*, they should report research that is *pioneering* in nature. Authors should clearly understand that space limitations may make it impossible to publish manuscripts that describe work that was performed competently but that does not break new conceptual ground; papers that describe results that have already been obtained with closely related virus or cell systems may be accepted only in exceptional circumstances. *Fourth*, they should be written as concisely as possible, their length being the minimum compatible with a clear presentation and interpretation of the experimental data. Repetition, such as between the Materials and Methods section and figure legends, should be carefully avoided. The Introduction should contain only material relevant to the research that is described; and the Discussion, which should exceed two pages only in exceptional circumstances, should be constructively interpretative and not merely restate the experimental results. Good writing requires careful examination that every word, phrase, and sentence is essential and arranged in logical sequence.

Manuscripts are accepted for review on the understanding that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; that any person cited as a source of personal communications has approved such citations; that locally and nationally prescribed safety regulations governing exposure of laboratory personnel and contamination of the environment have been observed; and that all variant virus and cell strains described or mentioned in the paper will be freely available for distribution upon request to all qualified members of the scientific community. Written verification of these conditions may be required at the Editors' discretion. Articles and any other material published in *Virology* represent the opinions of the author(s) and should not be construed as reflecting the opinions of the Editors and the Publisher.

Manuscripts should be submitted in duplicate to the editorial office of *Virology*, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101, by first class mail in flat form.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be typewritten (not mimeographed), with wide margins on high quality bond paper, using double or triple spacing throughout. Subdivision of articles into *Abstract*, *Introduction*, *Materials and Methods*, *Results*, *Discussion*, *Acknowledgments*, and *References* is recommended. The manuscript must begin with an *Abstract*. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiment described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given. Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and Tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be in finished form suitable for reproduction. Figures should be planned to fit the proportion of the printed page (5½″ × 8″, column width: 2½″). Lettering on drawings should be made with a lettering set and should be large enough to take a reduction of 50–60 percent. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper, if used, should be ruled in blue.

Photographs should be glossy prints with strong contrasts, and the magnification should be indicated by a scale. Photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated. Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text.

References. Names of authors should be mentioned in the text with the year of publication in parentheses. References should be listed alphabetically at the end of the paper as follows: Dawson, W. O., and Dodds, J. A. (1982). Characterization of subgenomic double-stranded RNAs from virus-infected plants. *Biochem. Biophys. Res. Commun.* **107,** 1230–1235. **See, however, the instructions** for *Short Communications* **below.** The names of journals should be abbreviated according to the *Chemical Abstracts Service Source Index,* 1985. References to books should include: author's name, year of publication, title of book (editor of book, if any), edition (if other than first), publisher, and place of publication.

Include in the reference list articles that are "in press," but incorporate in text or use footnotes for "manuscript in preparation," "unpublished observations," and "personal communication."

Abbreviations and Symbols. Where abbreviations are employed the author is asked to follow the usage established by *Chemical Abstracts Service Source Index,* 1985.

Nomenclature of Microorganisms. Binomial Latin names, with authorities, should be used in accordance with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. A specific name should not be used without an accompanying capitalized generic name. The generic name for each species should be written in full where it first occurs in the text and again in the summary. Where the generic name appears frequently in the text it may be abbreviated by using the initial letter.

Short Communications. This section is open to short preliminary reports of important findings. They should not exceed six double-spaced typewritten pages including tables and illustrations. Do not use any section headings. All short communications must have abstracts. Illustrative material should be kept to a minimum (usually not more than one table or figure). Literature should be cited as follows: References should be given serial numbers in the text and listed consecutively at the end of the text (serial number, author, name of journal, volume, first and last page, and year of publication).

This section does not provide an accelerated means of publication, but is designed to offer the opportunity to present in brief form noteworthy results of works in progress.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantities.
